

Ben Boyum Filter Strips

Practice:

Filter Strips

Benefits:

- Reduced Erosion and Soil Loss
- Improved Water Quality
- Improved Wildlife Habitat

Partners:

- North Cannon River Watershed Management Organization
- Minnesota Board of Water and Soil Resources
- Minnesota Pollution Control Agency
- Natural Resources Conservation Service

Watershed:

Cannon River

Installation:

2013

Project:

A 4.7-acre filter strip adjacent to a large wetland complex, and a 5.2-acre filter strip adjacent to Chub Creek, have been re-enrolled into the United States Department of Agriculture's Continuous Conservation Reserve Program (CRP) for 15-years. The filter strip vegetation serves to filter pollutants from upstream runoff before entering the creek, and provide improved nesting cover and wildlife habitat.

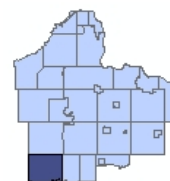

Funding:

9.9 acres of filter strips under 15-year contract:

Federal	\$205/acre/year
State Clean Water Fund	\$ 45/acre/year

Location:

Greenvale Township
Sections 2 and 11

*Clean Water Fund:
Protecting and
restoring
Minnesota's waters
for generations to
come.*
